

Guide To Quality Management Systems For The Food Industry

Guide to Quality Management Systems for the Food Industry
Ralph Early

Many food companies have difficulty establishing quality assurance programmes, and find that implementing quality management systems can lead to over complication and unnecessary cost. This book provides a pragmatic approach to quality assurance and quality management in the context of the food industry, and acknowledges that different approaches to quality are appropriate for different companies, depending on size and resources. The book takes the reader on a journey from consideration of the need for food manufacturers to manage quality, through the nature and implications of quality costs, and on to discussion of Quality Assurance Programmes, Quality Management Systems and registration to ISO 9000, finishing with Total Quality Management.

The material has been carefully researched by an author who has personally designed and implemented, in large and small companies, many quality systems which have stood the test of time. The book dispels some of the numerous myths surrounding its subject and provides information which is authoritative, well-referenced and, above all, highly practical.

Written primarily for the food industry where quality assurance staff with a technical and/or management background will find this book an invaluable guide and concentrated source of information, it will also be of interest to academic, research and government institutions.

Ralph Early is Senior Lecturer in the Seale-Hayne Faculty of Agriculture, Food and Land Use, University of Plymouth, UK. He has over 19 years experience in the food industry, from the shop floor to senior management positions, in production, research and development, quality assurance and quality management. Formerly Quality Standards Manager with Dairy Crest Ltd, he has also worked with many food and non-food companies in the capacity of quality consultant, designing and implementing quality management systems and training personnel in quality assurance principles and practice.
